

HEALTHY, WRINKLE-FREE
SKIN
without surgery or toxins!

By Dr. Valerie Davis

DAVIS DERMATOLOGY

Reduce Your Wrinkles

A Natural Solution Without Surgery or Toxins

By Valerie G. Davis, M.D.

No matter what your age, everyone wants to look better.

I have amazing news to help you! I have uncovered the best natural solution I have seen in over 25 years of taking personal care of people's faces.

In today's world, it's a fact that a person's face is the primary indicator of one's true age.

However, not all solutions to combat this issue are created equal, and many are either invasive or involve using synthetic chemicals.

This new solution is much more natural and thorough - and best of all, it comes from the best possible source: your own body!

Exactly why do our faces look worse when we age?

There are four main reasons:

1. Dulling of skin: Young faces are lustrous and luminous. As you age, the surface of the skin becomes dull, due to built-up layers of dead skin cells. *Wouldn't it be nice to easily recapture that lustrous, youthful look?*
2. Discoloration: the effects of the sun over time create brown spots and broken blood vessels. This produces an uneven tone that hides our natural beauty. *Do you have these?*
3. Loss of Volume: Young faces give off more of a "full" appearance; for example, baby's cheeks are so plump you can't help but want to squeeze them. As we age, parts of our face naturally cave in, and this makes us look older.
4. Sagging: Gravity, combined with the loss of skin elasticity, makes the face sag and droop. Everything goes south.

The earlier in the process we intervene, the more youthful appearance that we can retain.

The aging process truly begins around age 35; it is never too early to start taking care of what you have – and it is never too late to look better!

To address these issues of our aging faces, we need a solution that makes the skin look luminous and even-toned, builds back the lost structure, and reverses the effects of gravity.

In short: **we need help!** Fortunately, we have answers.

Currently, medical practitioners are using a handful of common techniques to help people. Let's take a look at what's out there. What are the most common fixes to the aforementioned skin problems associated with aging?

Partial Fix #1: Botox

One popular quick fix is Botox. This treatment is derived from botulinum toxin, a nerve toxin that paralyzes the facial muscles. The wrinkles show less because the muscles are not moving as they normally would. As muscles go unused, they weaken. Thus, Botox is only a quick visual fix, not a long-term solution.

Lastly, Botox does nothing to enhance skin tone and luminosity, and nothing to regain our youthful fullness. Botox is best used for fine-tuning, and not as a thorough solution to the changes of aging.

Don't settle for this quick-fix. You deserve a more thorough treatment.

Partial Fix #2: Surgical Facelifts

Have you ever caught yourself staring at someone who had a facelift, and something just doesn't look right? ? You realize that although they have almost no wrinkles, something looks peculiar. Do you want to know why?

To reiterate, as we get older, the loss of structure in our face leaves it looking flat. A surgical facelift pulls the aged skin over an already flat face and ultimately leaves the face looking even flatter. As a result, others will often look at a patient of someone who just had a facelift and think, "They look great...but something is just off." The reason they look peculiar is because a flat face, even with no wrinkles, is still not an attractive face.

Additionally, facelifts are a major operation; there is nothing simple or easy about them. Aside from the pain of the surgery itself, there is a lot of post-operation downtime with continued pain and swelling. Further, although rare, sometimes the surgeries can produce serious scars or nerve damage.

Once again, like Botox, surgical facelifts provide no new volume and no improvement towards an even skin tone or lovely luster. You deserve better than that.

While Botox and surgical facelifts instantly produce a dramatic change in the way you look. Many people don't want others to know that they've "had work done." It can also be strange for your friends, family, and coworkers to see this sudden change. We have a new treatment that improves your appearance more gradually, giving a more natural look, which will allow people to notice that you look better without abrupt changes to your appearance.

Partial Fix #3: Synthetic Derm Fillers

One of the most popular wrinkle treatments is a line of products called derm fillers. Derm filler treatments consist of injecting a synthetic, lab-based product directly into wrinkled areas and other regions where the face has hollowed.

Derm fillers address the problem of the loss of volume, and they are effective. For the most part, though, they do not address the surface issues of the skin, including improving luster or addressing discoloration. Most derm fillers begin to deteriorate as soon as they are injected. They last anywhere from four months to 18 months, depending on the product. The amount of volume that can be filled depends on how much product is cost-effective; companies charge physicians a very high price for each syringe of product, and this is one of the reasons that derm fillers are so expensive.

What if we could obtain an unlimited amount of filler, directly from your own body? Now there is an even better treatment that uses filler created completely by your own body that actually stimulates the skin to reproduce its own tissue.

What if there existed a new treatment that allows skin to create new growth as soon as it was performed?

Again, this new treatment is natural and safe, as it helps your skin reproduce. It's a complete process, because it addresses all four of the problems: luster, tone, volume, and sagging. It looks so natural, your friends will never question whether you had surgery. This facelift alternative is completely non-surgical, and you can start to see a difference in your skin *immediately, before you leave the procedure room!*

What is it this "best of both worlds," safe, natural treatment?

This new alternative is called the **Naturally Yours Cell Filler**. It's similar to the Plasma Rich Platelet Facelift you may have heard about, and builds upon that process by utilizing the latest scientific technologies, research, and development. We include something that makes a huge difference: **OZONE!**

Ozone is supercharged oxygen that stimulates your cells to make something called "growth factors;" these do just what they say – they induce your skin to grow new youthful tissues. This highly developed process also utilizes essential vitamins and nutrients that make the process even more powerful. So, how does it work?

How it works

The process has two parts. First, we take a few vials of blood—just like a blood test—and then spin them in a high-tech centrifuge. This unique design separates the stem cells in your blood into a concentrate, so they can be captured to be put back into your skin, thereby starting your rejuvenation process. We also create a “golden serum.” We use some of the serum to put into the skin surface and some to create your own custom filler. Best of all, your very own stem cells are added to the golden serum so you can start developing your new skin cells right away. Next, we will add the supercharged oxygen, along with other key nutrients, to create an all-natural cell filler made *from your own cells!*

One of the many amazing aspects about ozone is that it stimulates the cells to produce molecules called growth factors. As the name implies, this allows new cells to develop. These growth factors are much more powerful and effective in skin rejuvenation.

This revolutionary treatment is so powerful that **within minutes after injection, one can see a marked difference in the skin.** While a patient is in the middle of the treatment, their skin starts to glow and look smoother. It is quite amazing to see!

No recovery time needed!

Can you believe that you haven't heard the best part yet? Unlike a surgical facelift, *there is almost no downtime* with minimal bruising or swelling. You're able to get up, walk right out of the office, put your makeup back on, and go on with your daily activities.

Better than a commercial filler!

Additionally, the serum - made from your own beautiful plasma and full of ozone, Vitamin C, and other nutrients - works all over the face, neck, and hands, unlike the usual derm fillers. We place this natural filler into the areas of your face that need lifting and a youthful fullness. Unlike commercial fillers, in which an average of 2-4 expensive commercially-filled syringes are used in one session, we have 15-20 syringes of your own plasma gel available for you; if needed, we can use even more gel, as your body produces an unlimited supply!

Not limited to the face!

This gel can also be used to plump up the back of the hands, which as we know, often give away our age. First, the serum is placed all over the entire face, neck, nape, and back of the hands; this is done to help diminish fine lines (especially around the eyes and lips), brown spots, broken blood vessels, and scars. The serum produces a healthy glow and helps to restore the upper layers of your skin.

Dr. Davis evaluates the contours of your face and artistically determines where to place the plasma gel to reshape your face and restore beauty. Although the process is focused on the facial area, it makes such a difference in the way a person looks and feels all over.

Convenient for your schedule! Only takes two hours!

Finally, the process couldn't be more convenient for your schedule. The entire procedure takes about two hours. During the first hour, we draw your blood, transform your plasma, and apply a numbing cream to the desired procedure area. The second hour consists of applying the filler and golden serum. Then, you are on your way, no need to hide inside! Put your make-up back on and get on with your day!

Long lasting results of 18 to 24 months!

Unlike derm fillers that only last a few months, results from the Naturally Yours Cell Filler last from 18 to 24 months. No need for frequently repeated procedures.

Strong yet subtle and natural enhancement!

The benefits continue! With this natural cell filler technique, a more rested and glowing look is created. It is strong, yet subtle; no awkward stares that come with surgical facelifts, in which your appearance has dramatically changed overnight.. Instead, your friends will look at you and think, "You look really great today. What's your secret?"

There's More: A Special Cream Made From Your Own Growth Factors!

We are also able to use your stem cells and growth factors (just like the ones that we used in your procedure) and mix them into a special growth-factor cream. Incredibly, after the procedure, you can go home with a personalized cream with your own custom growth factors. This helps keep the benefits going and is a great advantage over commercial skin creams. The effects of the ozone and growth factors remain in the cream and continue to stimulate those cells to grow and the skin to rejuvenate.

What About Sun Damage?

Many of the patients who see me are not only concerned about wrinkles and indentations but also about the surface of their skin. A lot of people have broken blood vessels or brown spots that make their skin look red, ruddy, or uneven.

Let's face it, many of us did not use sunscreen when we were young. These broken vessels and brown spots are a result of sun damage over a lifetime.

Broken blood vessels are hard to get rid of; there are only a few creams—all which are not ideal. The plasma treatment—thanks to growth factors—can diminish these spots and broken blood vessels.

Now your skin has that even tone and lustrous youthful glow.

Wait—There's Even More!

Let's compare our faces to a leather sofa. The leather is the skin and the cushions are the structure. The leather is stretched over a foam cushion, which is like the fat. A wooden frame is like our bone. If the wooden frame or foam is deteriorating, the leather will start to cave in. No matter how much work is put into the leather itself, it still caves in, the way our faces do. Good structure is key.

This fantastic procedure gives us back our structure! Because these growth factors stimulated by the supercharged oxygen have the potential to rejuvenate any cell, they can help increase our natural skin structure. When we see children, they have nice, plump cheeks. When we look at models in the magazines, their faces have fullness. That makes a person look much more youthful. This advantage comes from using this natural cell filler, rather than the ones made in a lab. Botox and other fillers don't help to re-create an underlying structure. The Naturally Yours Cell Filler does.

Artificial cell fillers plump the skin and perhaps give better contour, leaving you looking younger. Rejuvenation is not stimulated, nor is your skin vitality increased. However, with this new method of rejuvenation, oxygen, and the body's natural substances stimulate growth and repair what is necessary.

Do you want the following:

- I want smoother skin with a more even tone!
- I want my skin to glow!
- I want my wrinkles reduced!

- I want those hollowed-in areas to regain their youthful fullness!
- I want it to look natural!

If you said **YES** to any of these statements, then come see us today at Davis Dermatology and let's talk about our **Naturally Yours Cell Filler!**

**YES! I Want My Skin to Look Healthy
and Reduce My Wrinkles With
Dr. Davis' Naturally Yours Cell Filler!**
